

WASTE MANAGEMENT IN ACTION

From waste to worth: The systems that turn rubbish into resources

Collection and Drop-off

Drop-off points

Convenient locations for communities to deposit recyclables or hazardous waste.

Collection systems

Trucks, bins and other equipment for collecting waste from homes, businesses and public spaces.

Buy-back centres

Facilities where individuals or waste pickers sell recyclables for money.

Sorting and Processing

Transfer stations

Facilities where waste is temporarily stored for transport to treatment or disposal sites.

Material Recovery Facilities (MRFs)

Facilities where mixed recyclables are sorted and processed.

Recycling plants

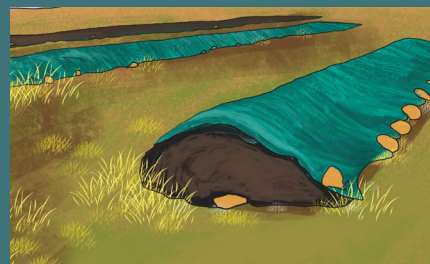

Centres where recyclables are sorted, processed and prepared.

Management and Education

Landfills

Big holes in the ground to dispose of and store waste safely.

Composting sites

Facilities for organic waste to decompose and turn into nutrient-rich soil.

Education and awareness

Campaigns to create awareness and teach the public about reducing, reusing and recycling.

Every step in waste management makes a difference.

Reduce, reuse and recycle.

Let's protect our environment for future generations.
